**Engineered simplicity.
Now, at scale.**

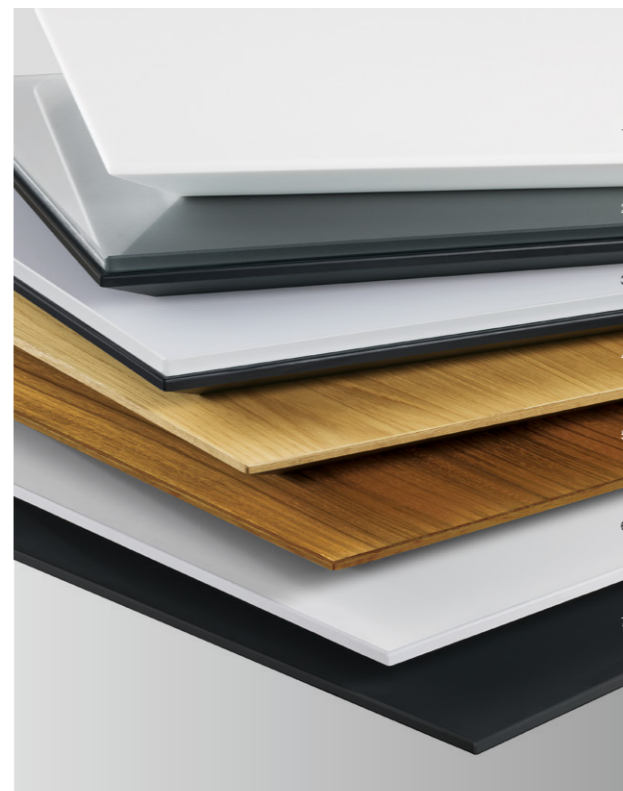

Conference rooms and the tables around which we gather are changing. They have become a gathering place for collaboration, from informal to formal, small to large groups. The newest member of the Traverse table collection — Traverse Satellite — offers Okamura's incomparable attention to detail and engineering-forward design, at a size appropriate for smaller conference rooms and offices.

A beautiful shape is the best function.

Satellite's table top is less than 30mm thick. Inspired by the slenderness of a brushstroke, the surface is complemented by an elegantly designed frame that guarantees both stability and maximum leg room. Clear lines, and a lightness that makes the table appear longer, thinner, linear, narrow.

- Veneer
- Laminate

Exquisite finishes

Building upon the elegant profile of the original Traverse Conference Table, Traverse Satellite comes in a variety of rectangular and round top sizes with a range of carefully curated finish options including, glass, Corian, wood veneer and laminate. The original table's diagonal wood sawhorse bases inspire the new tables' sleek diagonal legs that are available in painted or anodized aluminum.

| 1. Corian® / GGA5 (Designer White) | 4. Natural Wood Veneer / WE55 (Oak) |
| 2. Glass / H295 (Metal Gray) | 5. Natural Wood Veneer / WE54 (Teak) |
| 3. Glass / H208 (White) | 6. High Pressure Laminate / MG99 (Brite White) |
| | 7. High Pressure Laminate / MP53 (Black) |

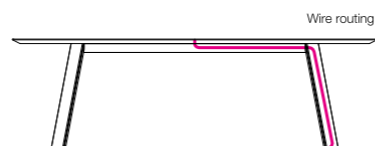

Technology, hidden but fully powered.

Satellite's rectangular and square tables have flush-mounted metal hatches that are available in various finishes such as veneer, laminate, and Corian®.

A small, connective Tech Cradle is available, discreetly tucked under the tabletop.

At the bottom of one leg of each table is an inconspicuous access aperture for connecting the electrical and data systems to the floor outlet. The flexible leg attachment design allows minimizing the length of exposed wiring and cable.

Designed by Rainlight

The traverse satellite Collection is designed in collaboration with Rainlight – a product design studio with offices in London and New York, and client collaborations spanning the globe. Rainlight is uniquely able to uncover the needs of a changing world through their cross-cultural and inter-disciplinary research practice. Part Laboratory, part workshop, part studio, Rainlight combines inspired design thinking with business acumen to create artefacts that enhance how people live, work, and play in the real world.
